

MERCURY EMISSIONS'

To Those Who Seek Understanding,

Recently, the tangential issue of "mercury emissions" from coal-fired power plants has been raised by those seeking to deflect our concern from the UNNECESSARY mercury injected into many of us, our children, grandchildren, and

The questions I hear are:

- 1. "What about the mercury from coal-fired power plants?"**
- 2. "Why isn't more being done to reduce:**
 - a. the emissions of mercury from coal-fired power plants or**
 - b. more broadly, industrial mercury emissions?"**

Usually, those who are asking these questions are medical doctors, pharmaceutical industry reps, people in the various media, and governmental officials who do NOT seem to be environmental activists, but who are most definitely "Thimerosal in vaccines" apologists.

But, if the issue is the poisoning of the environment with "mercury emissions" and we all agree that "mercury emissions" should be reduced, then let us also reduce those "mercury emissions" emitted by our vaccine manufacturers who, without PROOF OF SAFETY, put the unnecessary mercury emission, Thimerosal, into some of our vaccines.

Are not Thimerosal-containing vaccines "mercury emissions" (certainly, they are emitted by the vaccine maker) that get injected directly into our children and ourselves?

Why aren't these questioners talking about eliminating these?

Since we have only limited direct control over the "mercury emissions" that we and our children breathe in or eat, then, as these questioners suggest, we should focus on eliminating those mercury emissions" that we do have direct control over by refusing any drug, including any vaccine, that has a "mercury emission" (Thimerosal) in it at any level and lobby for all drugs to disclose, in parts per billion ("n" parts in 1,000,000,000), the name of the mercury compound and the parts per billion mercury that it contains since many mercury compounds also induce allergic immune-system responses.

After all, based on the baby-monkey study by Burbacher et al, the current injected "mercury emission" (Thimerosal) is, on average, more than twice as toxic as the mercury in the tuna fish that we are warned about.

Let us get on the bandwagon opposing "mercury emissions" by FIRST demanding that all "mercury emissions" be BANNED from all drugs UNLESS the "mercury emission's" level is disclosed in all drugs, including vaccines, and that disclosed level has been PROVEN to be SAFE.

The next "mercury emission" that we need to address is the "mercury emission" (mercury amalgam) that, though there are "mercury-free" alternatives, dentists use to "fill" our teeth.

Let us refuse to let any dentist fill our and our children's teeth with a "mercury emission" (the mercury amalgams "emitted" by dentists).

Finally, since the industries in China and other coal-burning Asian countries emit more than ten (10) times as much "mercury" as U.S. firms, let us:

1. Boycott all their goods and services UNTIL China and these other coal-burning countries have reduced their industrial "mercury emissions" to same relative level as where our industry is today, and
2. Join:
 - a. with U.S. environmental groups to reduce U.S. mercury emissions as much as current "best practical technology" ("BPT") will permit and
 - b. the fight to overturn the EPA's "Clear Skies" initiative that does little to reduce "mercury emissions" as much as possible.

Let us also ask those who oppose getting Thimerosal out of vaccines to explain why they are OPPOSED to REDUCING "mercury emissions" when they are the ones who raised the issue in the first place.

“REDUCE Mercury Emissions!!!”

“BAN Mercury From ALL Drugs!!!”

“BAN Mercury From Dentistry!!!” —

all sound like a good deal to me.

TABLE 1 — Mercury Poisoning By Any Name Is Mercury Poisoning

Mercury Poisoning By:	Called:
Mercury salts used in hat making	Mad Hatter’s disease characterized by irritability and nervousness
<u>Prolonged</u> exposure to elemental mercury and mercury amalgams	Acrodynia (Pink Disease) pink skin, peripheral neural pain, other conditions (1)
<u>Short-term</u> exposure to mercury(I) chloride in baby’s teething powders	Acrodynia (Pink Disease) [and Young’s syndrome in adulthood after childhood exposure to mercury-containing (calomel) teething powders]
“ Methyl mercury ” in fish poisoned by mercury waste discharged by companies with government concurrence	Japanese ‘strange disease’
Thimerosal (49.55% organic mercury) in vaccines injected into humans from birth to death.	<p>American ‘mystery disease’ — Hidden behind a plethora of “disorders” or “syndromes” having no proven “cause” or defined therapy:</p> <ul style="list-style-type: none"> • “neurodevelopmental disorders” [e.g., autism, Asperger’s disorder, ADHD, ADD, childhood disintegrative disorder, Rhett syndrome]; • “behavioral disorders” [e.g., Childhood Bipolar Disorder, Dysthymic Disorder, Obsessive-Compulsive Disorder (OCD),]; • “endocrine disorders” [e.g., Cushing syndrome , Graves' disease, Hashimoto thyroiditis, and precocious puberty]; • “metabolic disorders” [e.g., lipid disorders, childhood Type II diabetes]; • “digestive disorders” [e.g., irritable bowel syndrome]; and • “mental disorders in the aging” [e.g., Alzheimer’s], <p>which only came to be “prevalent” after Thimerosal dosing was increased in the late 1980’s.</p>
